

Advisory Notice

Date Released: 2016-April-1

Posted By: Quality Control

Effective Date: 2016-March-30

Product Affected: Anti H. Pylori IgM Enzyme Reagents

Brief Description of Advisory: Difference in appearance of color

To whom it may concern,

Please be advised that with Monobind's Anti-H. Pylori IgM ELISA products, the color of the enzyme reagents in lot **15Q1C6** (and thereafter) appears different when compared with previous lots.

This is due to new buffer which has caused the color to shift from purple in previous lots to teal (bluish-green).

All other aspects of the product remain the same and this change does not impact the performance of the assay. End-users may be notified to be prepared for the new appearance.

As an official of the company, I verify this information to be true and correct.

Sincerely,

Anthony Shatola

Quality Control Director
